

Shop Lead - Valve Automation Technician – Edmonton, Ab

Our candidate would be responsible for oversight, procedure implementation, and performance of technical duties related to assembly/testing of Pneumatic, Hydraulic & Electric valve automation packages, VAC production/scheduling/staging, as well as intermittent Inside Sales Automation coverage. This newly created opportunity will allow the candidate input to the development of a high quality automation facility.

Essential Duties and Responsibilities (but not limited to):

- Assemble and test Pneumatic, Hydraulic, Electric & Mechanically automated assemblies including accessories and controls
- Perform modifications and repairs to actuators (seals, spring changes)
- Ability to read schematics, wiring diagrams / P&ID's
- Troubleshooting/brainstorming applications to ensure quality solutions are provided
- Serve as point of contact for technical/quality issues for Valve Automation Manager
- Field service related inquiries and provision of technical assistance to customer base
- Experience with electric wiring requirements related to controls and electric operators
- Able to perform the essential duties without immediate supervision
- Pull stock and buyout items for assembly and shipment of customer orders or transfers
- Inspect all fabricated and purchased materials to ensure that customer specifications and industry codes and standards are met, create NCR/responsive action as required
- Document and maintain records to comply with build requirements/industry standards
- Work in conjunction with sales team to achieve effective production scheduling and staging
- Coordinate between inside sales and shipping department to assure efficient, timely deliveries
- Perform other duties and projects as assigned – relief coverage for valve automation inside sales quotations – actuator sizing, accessory principle implementation, etc.
- Be a guiding force in the safety and health of yourself and others; reporting workplace hazards, injuries, or illness immediately.

Job Requirements:

- High School or GED equivalency a minimum requirement
- Technical post-secondary education to related field considered an asset
- Minimum 5 years of hands on valve automation assembly and integration experience
- 1-2 years experience in actuation repair and maintenance an asset
- Experience with millwrighting, machining and welding considered an asset

Position Benefits:

- A competitive compensation package
- A comprehensive benefit's package including: Medical, Dental and Vision Coverage
- 2% RRSP matching program

Strong candidates for this position are encouraged to apply. Please forward your resume in confidence to either Russ Martin at russellm@quantumltd.com or Kim Norton at kim.norton@quantumdltd.com.

Only those candidates selected for the interview process will be contacted.
